

Caravan

The main function you need is adjustment. Not all signals travel at the same height. The environment plays a very significant role in the arrival of a RF signal. A guide would be: **Horizontal Signals.** Height adjustments can be 500mm or a little more. You are unlikely to miss the signal.

Vertical Signals Tiny increments of additional height would be best. Like 30 to 50mm Close to the ground is often much better than any great height.

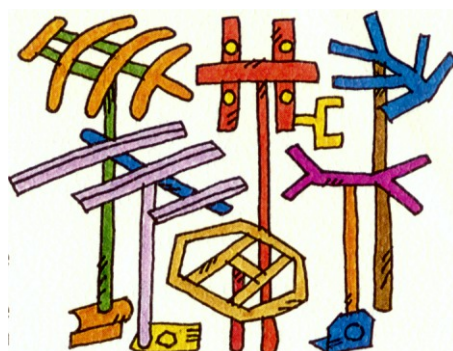

There are two versions available. The difference is the maximum height. They are lightweight and anodized. Spare parts are available for wearing components.

Home/Commercial

There are 3 available. A basic short mast that suits chimneys, fascia brackets, stramits or gable ends.

The telescopic variety would suit ridge mounts, wall mounts double chimney mounts and would provide the added height if the terrain was hilly. These are for permanent mounting and are designed that way.

We have given careful thought to what is needed in any given location and provided appropriate choices including heights of up to 3.8M or 15' when needed. Often this will require guying which is a sub-category in this section.

3 PIECE TELESCOPIC LIGHTWEIGHT ANODIZED MAST

EXTENDS TO 4.2 M

Strong & Sturdy

Collapses to 1.65M

3 Piece mast each section is 1.5M with
