

A bit of a lost art apart from the big telecommunications towers. However, we have given you some items that are basic and easy to install if tackling your DIY installation. None of the equipment offered is for large mast installations beyond 6M 32mm outside diameter masts will work with the collars and guy rings offered.

Simple turnbuckles to secure your guy wire and a range of fixings to suit any roof. Adding a metre or two can make a massive difference to reliability of results. Higher peaks in the direction of the transmitter cause signal problems that are overcome with some additional height in most circumstances. If you need more specialized advice you can always get in touch.

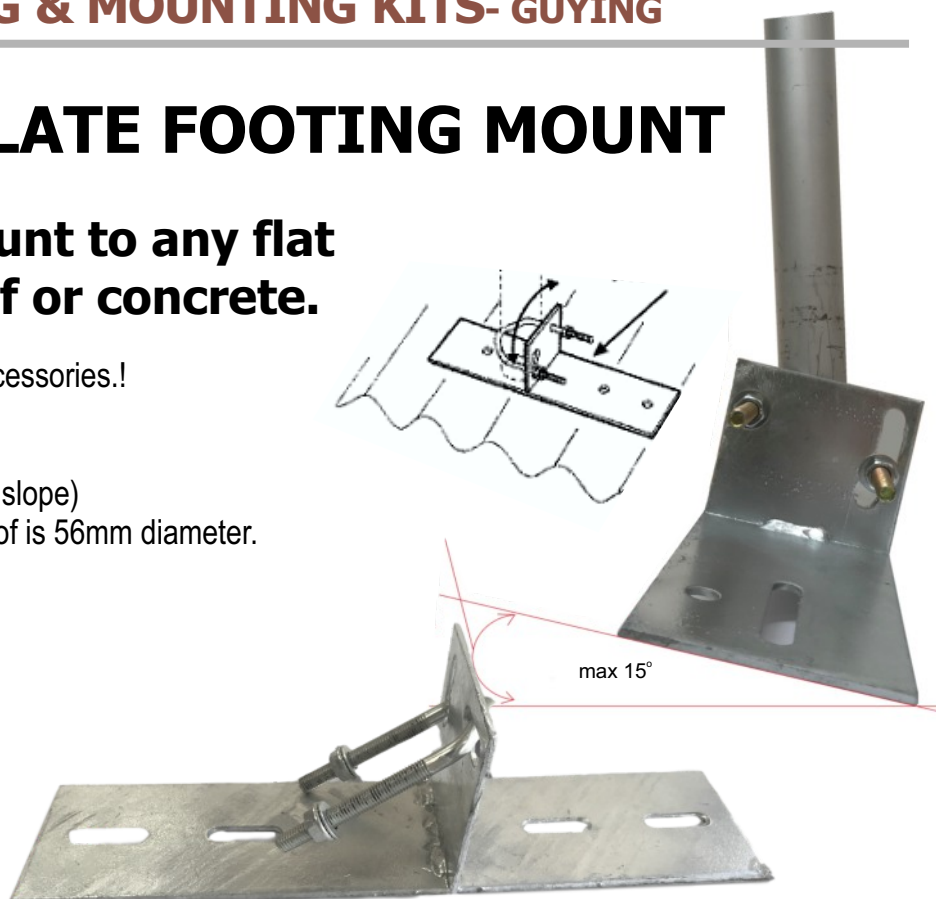

Example shown of the Screw Eye use as a Guying Wire Anchor point.

LIGHT FLAT PLATE FOOTING MOUNT
